

## TAKE CONTROL OF YOUR AIR PURIFIERS

AirBox has partnered with WellAware to allow commercial customers to control, program, and schedule their entire fleet of air purifiers to improve energy efficiency, optimize longevity of the filters, reduce maintenance hours and monitor that the purifiers are on and working properly.

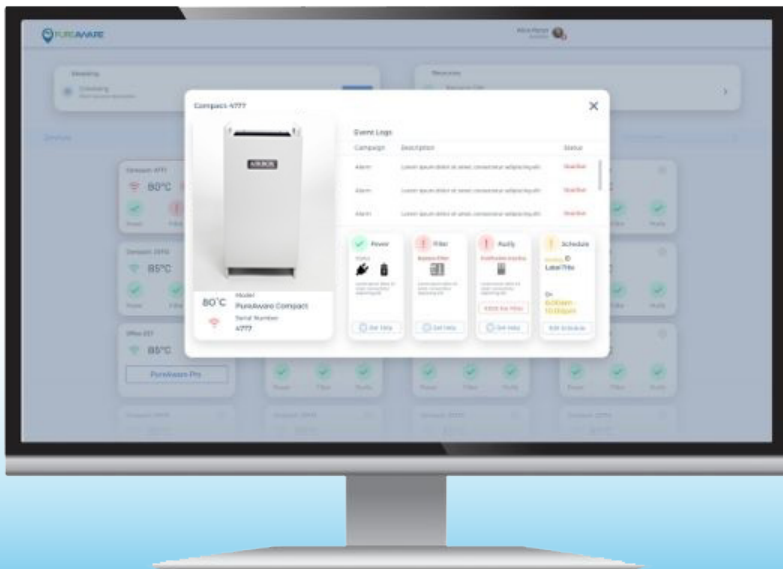

### FLEET MANAGEMENT DASHBOARD

User friendly dashboard allows for: grouping and scheduling your devices, speed and CFM adjustments, Notifications for filter life, disruptions in power and functionality.

### AIR PURIFIER REMOTE MONITORING

Each device includes a CO2 sensor which helps monitor respiratory particle load in the room, notifying the maintenance team that HVAC ventilation must be addressed, occupancy levels could be too high and allowing them to adjust the CFM on the device to accommodate for the increased respiratory particles in the air.

## REALIZE ROI BY SAVING WITH YOUR PURIFIERS.

### ENERGY SAVINGS

# \$40

### A YEAR PER UNIT\*

\* Assuming the unit is currently running at 275 CFM setting for 24 hours/day and having Smart Fleet Management scheduled to run for 10 hours/day, at an energy cost of \$0.13/kwh, monthly savings would be \$3.32

### FILTER SAVINGS

Reduced filter costs related to air purifier run time - Occupancy-based scheduling extends the life of your air purifier filters by turning on AirBox air purifiers only when needed. Users can provide comprehensive protection while still reducing costs.

### MANHOUR SAVINGS

# \$16.80

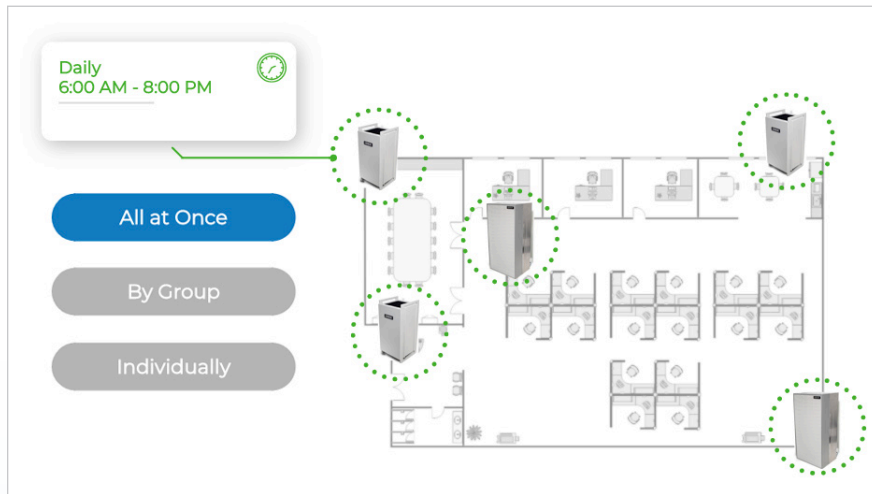

### PER MONTH‡

‡ Assuming 2 min per day per unit and a conservative \$35,000 salary for a maintenance manager.

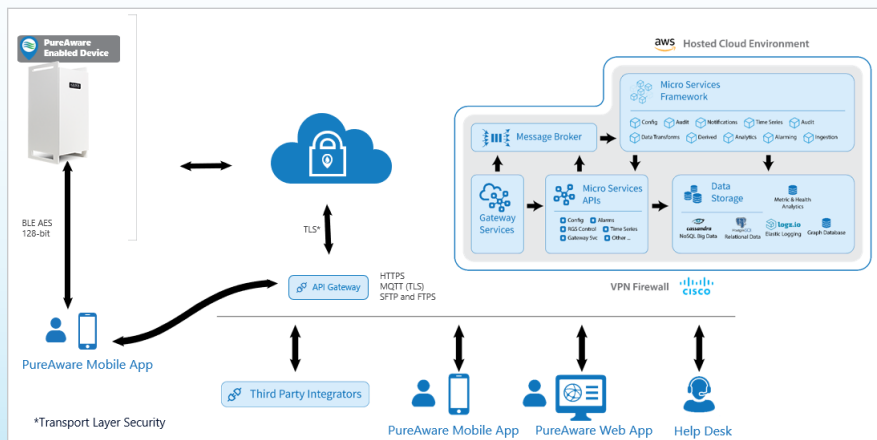

## AIR PURIFIER SCHEDULING

Schedule your fleet of air purifiers automatically and remotely with complete control over every one in your fleet. Place all of your portable air purifiers on the same schedule with the touch of a button.

## PLATFORM ARCHITECTURE

## FILTER NOTIFICATIONS

Monitor your filters, predict when they will require replacement, get notified when replacements are due, and track filter orders.

### MONITOR

Monitor filter status and track total filter run time and flow volume.

### PREDICT

Know when you'll need to replace your filters based on measured usage.

### NOTIFY

Get text and email notifications when filter replacements are needed.

### TRACK

Track filter orders and mark filter changes to better manage your fleet.
